

Safety Assured

LPG HOSE

Goodall Knows LPG

We developed our first LPG hose over 50 years ago with the goal of moving gas safely. More than half a century later, Goodall LPG hoses continue to set the industry standard. By using the highest quality materials and the best construction methods, our robust LPG hoses are Underwriter Laboratories approved and last up to 80% longer than the competition.

Goodall LPG Hose Construction

- Constructed with a smooth, seamlessly extruded, proprietary nitrile rubber compound, our hose is designed to resist typical drying and cracking from the transfer of liquefied petroleum gas. This premium quality tube maintains outstanding integrity, remaining pliable and flexible throughout the hose's lifespan.
- Our hose is reinforced with high-tensile stainless steel and/or textile braids, offering superior strength and flexibility. This braided reinforcement provides enhanced durability and strength compared to the spiral reinforcement used by many competitors.
- The tube and cover of our Elephant Hide series are shielded by a thick layer of our specially formulated, permeable, and pin-pricked neoprene compound. This extra tough compound resists serious abrasion, sunlight, and ozone exposure, making it ideal for critical service applications.
- Our Black Diamond hose features a neoprene impregnated polycotton braid, offering excellent resistance to weather, ozone, petroleum, and oil.

For the hardest-wearing and safest LPG hose on the market that sets the standard for durability and outlasts the competition, choose Goodall.

Goodall N2804 Elephant Hide

- Premium LPG transfer hose designed for demanding applications
- Exceptional abrasion resistance
- Ideal for tank truck service and trailer storage use
- Approved to UL 21 specifications
- USA only

Goodall N2805 Elephant Hide Plus

- Superior strength, bend radius, and kink resistance
- Exceptional abrasion resistance
- Ideal for tank truck service and trailer storage use
- Approved to UL 21 specifications
- USA only

Goodall N2737 Black Diamond

- Designed for hard-wearing performance
- Ideal for transferring LPG, propane, butane, and natural gas
- Meets CAN/CGA-8.1-M86 (Type II)
- Approved to UL 21 specifications

Goodall N2567 LPG

- Superior strength, bend radius, and kink resistance
- Ideal for tank truck service and trailer storage use
- Meets CAN/CGA-8.1-M86 (Type I)
- Approved to UL 21 specifications
