

Engineered to Outlast. Built to Perform.

ANHYDROUS AMMONIA HOSE

Goodall Knows Anhydrous Ammonia

For over 70 years, Goodall has been setting the industry benchmark with our anhydrous ammonia hose. Proudly made in North America, our hose is built to perform under pressure—literally. In a market with only two NH_3 hose manufacturers, Goodall stands alone with superior durability, safety, and value.

Goodall Anhydrous Ammonia Hose Construction

- Constructed with smooth, seamlessly extruded EPDM or Chlorobutyl tube options, our NH_3 hose offering is built specifically to resist anhydrous ammonia and provide exceptionally low permeation rates.
- Reinforced with high-tensile textile or stainless steel wire braids, our hose offers superior strength, corrosion resistance, flexibility, kink resistance, and durability.
- The tube and reinforcement is protected by a robust EPDM or Nitrile cover, specially blended to provide excellent abrasion, weather, and ozone resistance, ensuring longevity and peace of mind.
- Adhesion is an important factor in the integrity of a hose. Goodall hoses are built with up to 35% better adhesion between the tube, the braided reinforcement, and the cover. This increases safety and allows us to provide the longest warranties in the industry.

From fields to industrial tanks, Goodall NH₃ hoses outperform in environments where failure is not an option. Whether you choose textile or steel braid, you get best-in-class performance and peace of mind.

Goodall N2000 Century 2000

- The top-performing textile-reinforced NH₃ hose on the market
- 50% thicker tube than competing products for reduced permeation
- Excellent abrasion, weather, and ozone resistance
- 6-year warranty when used for seasonal agricultural applications

Goodall N2595 Rifleman

- Ideal for environments requiring extra durability
- 15x less permeable than competing EPDM tube hoses
- Braided stainless steel reinforcement provides increased strength, durability, and safety
- Exceptional abrasion, weather, and ozone resistance
- Generous 8-year warranty when used for seasonal agricultural applications

Goodall N1446 Super Long Life

- The most robust NH₃ hose available on the market
- 15x less permeable than competing EPDM tube hoses
- Braided stainless steel reinforcement provides increased strength, durability, and safety
- Exceptional abrasion, weather, and ozone resistance
- Unmatched 10-year warranty when used for seasonal agricultural applications
