

**Even Tougher
Than Its Terrain**

AIR HOSE

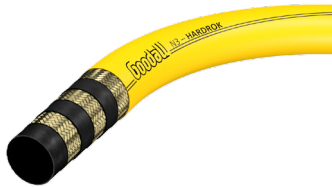

Goodall Knows Air

Goodall manufactured its first air hose over 50 years ago at our Collingwood, Ontario facility. More than half a century later, our air hose continues to be trusted throughout North America's mining, construction, and industrial markets for its exceptional durability and long service life. Built to resist deformation and withstand repeated abuse, Goodall air hose delivers dependable performance in the harshest operating environments.

Goodall Air Hose Construction

- Constructed with a dense, oil-resistant, seamlessly extruded nitrile rubber tube, our air hose resists swelling while maintaining outstanding flexibility and integrity throughout its service life.
- Our hose is reinforced with high-tensile, brass-plated steel wire braids that provide superior strength, flexibility, and kink resistance. Unlike the spiral reinforcement used by many competitors, our braided construction significantly improves hose integrity and reduces the risk of catastrophic hose failure.
- The tube and reinforcement are protected by a premium SBR cover that provides excellent resistance to abrasion, weather, and ozone, creating a rugged hose designed to withstand demanding applications.

When failure isn't an option, choose Goodall air hose. Built to withstand the harshest operating environments, Goodall delivers the strength, durability, and dependable performance professionals have trusted for over 50 years.

Goodall N3 Hardrok

- Our best-selling heavy-duty air hose
- Engineered to perform in the toughest mining, quarry, construction, and other rigorous air tool applications
- Premium rubber compounds deliver exceptional durability, long service life, and reduced downtime
- Steel wire braid reinforcement provides outstanding strength, flexibility, and kink resistance

Goodall N3000 Super Hardrok

- Features the same rugged construction as Hardrok with a 900 PSI working pressure
- Ideal for the most demanding applications

Goodall N2844 Air King

- Trusted by leading air compressor contractors for its heat resistance, robustness, reliability, and longevity

Goodall N1460 Defender

- Features the same steel wire braid construction and nitrile tube as our Hardrok hose
- Delivers dependable performance for medium-duty industrial applications
